Art Unit: 1641

## **DETAILED ACTION**

## Response to Amendment

1. Applicant's cancellation of claims 1-9 and addition of claims 10-40 are acknowledged and have been entered.

## Election/Restrictions

- I. Restriction to one of the following inventions is required under 35 U.S.C. 121:
  - I. Claims 10-25, drawn to an array of particles and a method of making the array, classified in class 204, subclass 193.
  - II. Claims 26-28, drawn to a lens array and a method of forming the lens array, classified in class 359, subclass 254.
  - III. Claims 29-34, drawn to an optical display and a method of forming an optical display, classified in class 359, subclass 296.
  - IV. Claims 35-40, drawn to a diffraction grating and a method of forming a diffraction grating, classified in class 359, subclass 558.

The inventions are distinct, each from the other because of the following reasons:

2. Inventions I, II, III and IV are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions have different modes of operation, different functions and different effects. The method of group I is directed toward forming an array of particles, requiring a second planar light sensitive electrode, the method of group II is directed toward forming a lens array, requiring an array capable of enhancing light that passes through the array, the method of group III is

Application/Control Number: 09/688,574

Art Unit: 1641

Page 3

directed toward forming an optical display, requiring generating a time varying electric field

sufficient to cause a plurality of small particles to selectively move under large particles to form

an on-pixel, and the method of group IV is directed toward forming a diffraction grating,

requiring the formation of a diffraction grating by particles.

3. Because these inventions are distinct for the reasons given above and have acquired a

separate status in the art as shown by their different classification, and the search required for

one group is not required for others, restriction for examination purposes as indicated is proper.

4. Any inquiry concerning this communication or earlier communications from the

examiner should be directed to Nelson Yang whose telephone number is (571) 272-0826. The

examiner can normally be reached on 8:30-5:00.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's

supervisor, Long V Le can be reached on (571)272-0823. The fax phone number for the

organization where this application or proceeding is assigned is 703-872-9306.

5. Information regarding the status of an application may be obtained from the Patent

Application Information Retrieval (PAIR) system. Status information for published applications

may be obtained from either Private PAIR or Public PAIR. Status information for unpublished

applications is available through Private PAIR only. For more information about the PAIR

system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR

system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
